Blake –

Sorry but I didn't get around to returning your call this morning.....with two incidents, my time is no longer my own. I am, however, on leave the next two days returning on Monday. I would tend to agree with your assumption. We await Region 9 sampling data results and data being collected by NTUA. I am next back on on Monday and will attempt to call you then.

Jon Rauscher did tell us at quick glance of the intakes data, the results are below the MCLs and screening levels.

Subject: gold king mine update

Last evening, our EPA START contractors set up a public web site and call in number:

Common 1-800 number: 1-844-607-9700

Common website: epa.gov/goldkingmine

Ron Curry and Ronnie Crossland attended a public meeting last night at Famington Civic Center and they shared the site/number with the public.

They both met with Secretary Ryan Flynn (NMED) also.

Results came back last night on the 14 private wells samples (taken Monday) and the post-plume intake samples (taken over the weekend).

Jon Rauscher is having a call with NMED to discuss the data this morning: **9:30 am 1-866-**

Nonresponsive Conference Code **code:** Nonresponsive Conference Code

I haven't seen the data but will be sitting in on part of the call on 8th floor. Please feel free to do the same or call in if available.

Thank you
